

JTA Health Safety & Noise is a well-established and quality accredited occupational health and safety consultancy that has been operating throughout Australia for 30 years. Well respected in the industry, JTA delivers services across its Health, Safety and Noise divisions. JTA's head office is located in the leafy bayside suburb of Elwood, Melbourne.

- Apply your skills and gain on-the-ground experience.
- Build your networks, and boost your chances of being offered a Graduate position at the end of your degree.
- Boost your income.

THE JTA INTERNSHIP JOURNEY

Your degree could help you secure a future with us, and take you to places you never imagined. With three divisions to choose from, there are a range of roles and directions open to you.

Your time at JTA will start with a thorough orientation, where you'll hear from senior managers, receive training and meet fellow interns and graduates. During your placement, we'll hold training and networking events where you can develop your skills, expand your networks and have fun.

As part of JTA's Internship Program, you will:

- Contribute from day one - be given real work that impacts our business and our clients.
- Receive training and development - receive formal training for technical and soft skill development, both relevant to the business and to your specific division.
- Enjoy support and networking opportunities – be partnered with a mentor to support you throughout the program.
- Gain access to senior management – be given unique access to senior leaders and directors.
- Enjoy stability - work at an established business that has been trading for 30 years, and benefit from offices in a great location with the latest technical innovations and much more.

WHAT ARE JTA LOOKING FOR?

We're looking for well-rounded candidates who have successfully balanced university, work experience and extra-curricular activities. Other skills essential to working successfully with us include the ability to work in a team and a desire to learn and drive your own career. As well as our service specific divisions we also recruit interns for sales, marketing, finance, HR and operation roles.

How do I apply?

Send a detailed Cover Letter and Resume on why you think you are a good match for our intern program to chiragp@jtahealthsafetynoise.com.au

GRADUATE PROGRAM

Our four year graduate program in either JTA Safety or JTA Noise will give you exposure to all operational areas of the business, in addition to your specialist division which will include technical duties (monitoring, modelling and analysis), report preparation and project management. You will be mentored closely by a Senior Consultant, guided every step of the way through your specialist division.

For more information and to be considered for our graduate program please get in touch with Chirag Patel on chiragp@jtahealthsafetynoise.com.au

JTA Health

Our Health division provides many services including:

- Audiometry Testing
- Spirometry Testing
- Corporate Health Checks and Well Being Seminars

Briana, Health Division

"I studied Bachelor of Public Health majoring in Nutrition at Griffith University on the Gold Coast, I've always had an interest in Health and decided to pursue a career in health management.

JTA recruited me as a Graduate, and working for a well-established organisation with such a breadth of services as my first role in industry has been a rewarding experience. I've had the opportunity to further develop and apply my skills in health management and learn about other aspects of the business in a very hands on manner."

JTA Safety

Our Safety division provides many services including:

- Occupational Hygiene Specialists
- Asbestos related services
- OHS Compliance & Management Systems
- Dangerous Goods & Hazardous Materials related work
- Many more safety related services

Aaron, Safety Division

"I studied Bachelor of Applied Science (Environmental Management of Hazardous Materials) and never really knew what an Occupational Hygienist did until I was given the opportunity to find out by JTA.

My career in Occupational Hygiene has allowed me to travel nationally and internationally, and work in many interesting environments, including noise testing of military weapons and aircraft, performing hazardous building inspections in outback NT, hazardous air monitoring of volcanic gases in a PNG gold mine, and hazardous chemical inspection of forensic evidence lockups containing clandestine laboratory chemicals.

I find the real-world application of science particularly satisfying. The work is diverse and challenging with the anticipation of new experiences around every corner."

JTA Noise

Our Noise division provides a number of services including:

- Occupational & Environmental Noise Assessments
- Aircraft Noise Reports to Building Acoustics Assessments
- Vibration Assessments and Sound Prediction Modelling

Will, Noise Division

"I studied Bachelor of Science majoring in Applied Physics at RMIT, and my interest in acoustics originally came from my love of music together with my ability in the sciences.

I enjoy working in Acoustics, there is a good mix of site time, analysis, reporting and seeing new places with this kind of work.

This role would be attractive to students who like interacting with people while applying scientific principles, using specialist equipment, analysing results and preparing reports. Essentially, we do practical problem solving to come up with solutions to help clients meet their legal obligations with regard to noise emissions."
